

RITIK KHANTWAL

NUTRITION SYSTEM 01

The Corporate Diet Plan

A fat-loss eating system built around Indian food, canteen menus and 10-hour workdays. No quinoa. No chicken-and-broccoli. No giving up rice.

Ritik Khantwal

Fitness & performance for Indian professionals

Edition 2026

Why every diet failed you

You didn't lack discipline. You were handed a plan designed for someone who cooks their own food, eats at fixed times and doesn't have a 7pm client call.

The Indian corporate professional has four food realities that no imported diet plan accounts for: a carb-heavy home kitchen, an unpredictable canteen, chai-and-biscuit culture, and dinner at 10pm. A plan that fights all four loses. This one works with them.

The only three numbers that matter

Lever	Target	Why it works for you
Protein	1.6 g per kg bodyweight	Protects muscle in a deficit and kills 4pm hunger. This is the single biggest gap in the Indian diet.
Calories	Bodyweight (kg) × 26 to 28	A moderate deficit you can hold for 12 weeks instead of a crash you quit in 9 days.
Steps	8,000 per day	Desk jobs burn 400–600 fewer calories a day than you think. Steps close that gap without the gym.

DO THIS FIRST

For a 78 kg professional: roughly **2,050 calories** and **125 g protein** a day. Write those two numbers on a sticky note. Everything else in this guide is just a way to hit them.

The protein-first rule

You do not need to track every meal. You need to make one decision before every meal: **where is the protein coming from?** Fill that first, then eat your normal food around it. This alone moves most people from 45 g of protein a day to 110 g.

Source	Portion	Protein
Whole eggs	3 eggs	18 g
Paneer	100 g	18 g
Chicken breast / thigh	150 g cooked	32 g
Curd (dahi)	1 bowl / 200 g	7 g
Greek yoghurt	150 g	15 g
Rajma / chana / dal (cooked)	1 katori	7–9 g
Soya chunks (dry weight)	30 g	16 g
Whey protein	1 scoop	24 g
Fish (rohu, surmai, basa)	150 g	28 g

Your day, structured

Four anchor points. Build every day around these and the numbers take care of themselves.

Anchor 1 — Breakfast (30–35 g protein)

The most-skipped protein meal in India. Poha and upma are near-zero protein. Fix breakfast and you're a third of the way done before you reach the office.

- **3 egg bhurji + 2 multigrain roti** — 10 minutes, 28 g protein
- **Paneer bhurji (100 g) + 1 roti** — the vegetarian default
- **Curd bowl + soaked chana + fruit** — zero cooking, for the 8am cab
- **Besan chilla (2) with paneer stuffing** — weekend-prep friendly

Anchor 2 — Lunch (35–40 g protein)

Whether it's a dabba or a canteen, use the **half-plate rule**: half the plate sabzi and salad, a quarter protein, a quarter rice or roti. You are not banning rice. You are capping it.

Anchor 3 — The 4pm decision (15–20 g protein)

This is where diets die. The vending machine, the samosa round, the birthday cake in the pantry. Pre-decide your snack and keep it in your desk drawer, not the pantry.

- Roasted chana — 1 small pack (10 g protein)
- Greek yoghurt cup from the office fridge (15 g)
- Whey shake in a shaker you keep at your desk (24 g)
- Boiled eggs from the morning dabba (12 g)

Anchor 4 — Dinner (30–35 g protein)

Late dinner is fine. Late *heavy* dinner is not — it wrecks sleep quality, which wrecks tomorrow's appetite control. Keep dinner protein-heavy and carb-light on nights you eat after 9:30pm.

THE CHAI MATHS

Five cups of sugar chai a day is roughly **350 calories** — about 3 kg of fat over a year. You don't have to quit chai. Drop to two sugars total per day, or switch to no-sugar after the second cup.

Sample week: veg and non-veg

Meal	Non-vegetarian	Vegetarian
Breakfast	3 egg bhurji, 2 roti, black coffee	Paneer bhurji 100 g, 2 roti
Mid-morning	Fruit + 10 almonds	Fruit + 10 almonds
Lunch	150 g chicken curry, 1 katori rice, 2 roti, salad, dahi	Rajma 1.5 katori, 1 katori rice, 2 roti, salad, dahi
4pm	Whey shake or roasted chana	Whey shake or roasted chana
Dinner	150 g fish/chicken + sabzi + 1 roti	Paneer/soya sabzi 150 g + 1 roti + dal
Totals	~2,050 kcal / 130 g protein	~2,050 kcal / 120 g protein

The 80/20 rule for Indian eating

Twenty percent of your weekly meals are outside your control — the client dinner, the wedding, the Diwali box, the team offsite. Plan for them instead of pretending they won't happen.

- **Eat before the event**, not after. A 25 g protein snack at 6pm changes what you do at an 8pm buffet.
- **One plate rule** at buffets. You can pick anything. You get one plate.
- **Alcohol**: pick clear spirits with soda. Two drinks maximum on a weeknight, and eat your protein first.
- **Don't compensate**. Skipping breakfast after a heavy dinner starts the binge cycle. Just return to the plan.

Your weekly scorecard

- ☐ Hit protein target on 6 of 7 days
- ☐ Averaged 8,000+ steps
- ☐ Two or fewer sugar chais per day
- ☐ No more than three meals eaten out
- ☐ Weighed in once, same day, same time, empty stomach

EXPECT THIS

Week 1–2: 1–2 kg drop (mostly water). Week 3 onwards: **0.5–0.75 kg per week**. If the scale hasn't moved in 14 days, your steps or your portions have slipped. Check those before cutting calories further.

This plan only fails one way

If you try to be perfect. Six good days and one loose day is a 12-week body transformation. Four perfect days and a Wednesday quit is nothing. Pick the boring version and stay in the game.
